

# STOP PAYING MORE PER GALLON OF WATER THAN YOU DO FOR GAS...

People are paying through the nose for their water. A recent report said that the average person drinks more than 28 gallons of bottled water per year. So, the average person is spending at least \$225 a year on bottled water OR more than \$8 a gallon for water! That's twice the cost of gas! Here's a question that all these bottled water drinkers never considered—do you really know where the water in those bottles is coming from?

FACT: Much of the bottled water today is simply drawn from another city's municipal water supply—according to MSNBC, it's more than 25%! Each of those bottles filled with allegedly “clean and healthy” water can be filled with anything and everything that's in that municipal water supply, which could include excess chlorine, pharmaceuticals, heavy metals, pesticides, and more! Just think of all the things that could be in that bottle of water, and you're paying more than \$8 a gallon for it!

**THE ONLY WAY TO BE REALLY SURE OF YOUR DRINKING WATER IS TO TAKE CARE OF IT YOURSELF WITH A REVERSE OSMOSIS DRINKING WATER SYSTEM.**

## Why choose a 5 stage reverse osmosis system?

### IMPROVES TASTE

Reverse osmosis filtration improves the taste, odor, and appearance of water by removing contaminants that cause taste and odor problems.

### SAVES MONEY

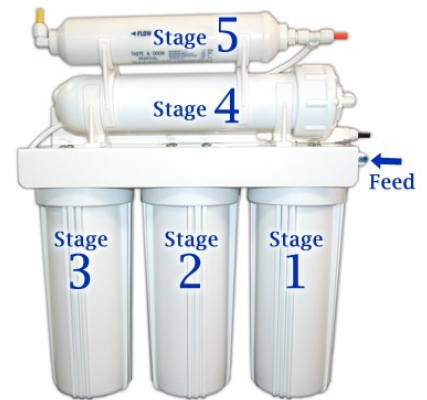

You can stop buying bottled water! Reverse osmosis filtration provides “better-than-bottled” quality water for just pennies per gallon.

### SIMPLE MAINTENANCE

Reverse osmosis systems are easily accessible under your kitchen sink and have very few moving or replaceable parts, making them easy to clean and service.

### REMOVES IMPURITIES

Reverse osmosis systems remove pollutants from water including salt, nitrates, pesticides, sulfates, fluoride, bacteria, pharmaceuticals, arsenic, lead, and much more. A reverse osmosis systems' carbon filter will also remove chlorine and chloramines.
